

Product Requirements Document (PRD)

AI-Powered Personal Portfolio Web App with Sidekick

1. Product Overview

Product Name: AI Portfolio with Personal Sidekick

Type: Interactive professional portfolio web application

Core Idea: A modern portfolio website that not only showcases work and experience, but also includes an AI "Sidekick" trained on the creator's background to communicate, answer questions, and guide visitors conversationally.

This product blends **personal branding, storytelling, and AI interaction** into a single immersive web experience.

2. Goals & Objectives

Primary Goals

1. Showcase professional identity, skills, and projects in a premium, modern format
2. Allow visitors to interact with an AI that represents the creator's knowledge, experience, and personality
3. Differentiate from traditional static portfolios through conversational UX
4. Create a memorable, product-style digital presence

Success Metrics

- Time spent on site
 - Number of interactions with AI Sidekick
 - Click-throughs to projects and GitHub
 - Contact form submissions
 - Resume downloads
-

3. Target Audience

- Recruiters and hiring managers
 - Potential collaborators and clients
 - Creative and tech peers
 - Event organizers or media contacts
-

4. Core Features

4.1 Premium Portfolio Website

A Shopify-inspired, motion-rich, product-style personal site.

Key Sections: - Hero introduction - About / Value proposition - AI Sidekick interactive section - Experience timeline - Project showcase (GitHub integration) - Extras / personality layer - Contact / CTA section

4.2 AI Sidekick (Primary Differentiator)

An AI assistant embedded into the site that communicates like the creator.

Purpose

- Answer questions about experience, skills, and projects
- Explain work in natural language
- Guide visitors to relevant sections
- Simulate conversation with the creator

Knowledge Sources (User-Provided)

- Latest resume
- Personal background details
- Old portfolio content
- Project descriptions
- Optional blog posts or writing samples

Capabilities

- Q&A about professional experience
- Project recommendations ("Show me your best frontend project")
- Skill explanations
- Career journey storytelling
- Personality-infused responses (within safe, professional boundaries)

Limitations

- Must not fabricate unknown achievements
 - Must avoid personal sensitive data
 - Must include fallback response when unsure
-

5. User Experience (UX)

5.1 Visitor Journey

1. Visitor lands on Hero section
 2. Scrolls through value proposition and highlights
 3. Encounters AI Sidekick invitation ("Ask me anything about my work")
 4. Chats with AI to explore background or projects
 5. Navigates to detailed project or experience sections
 6. Ends at strong CTA (contact, resume, GitHub)
-

5.2 AI Interaction UX

UI Pattern: Floating chat panel or dedicated Sidekick section

Core Elements: - Chat window with message history - Suggested prompt chips (e.g., "What are your top skills?") - Typing animation - Clear disclaimer that it's an AI representation

Tone: Professional, friendly, knowledgeable, aligned with the creator's personality

6. Functional Requirements

6.1 Portfolio Content System

- Admin-editable content (JSON, CMS, or Markdown-based)
- Sections dynamically rendered from structured data
- Easy updates for projects and experience

6.2 GitHub Integration

- Fetch repositories via GitHub API
- Highlight selected "featured projects"
- Display description, tech stack, stars (optional)

6.3 AI Sidekick System

Input: Visitor messages

Processing: AI model with context from user-provided data

Output: Conversational responses grounded in portfolio data

Core Functionalities: - Context injection from resume and portfolio data - Conversation memory within session - Predefined system prompt defining tone and boundaries - Suggested prompts for users

7. Non-Functional Requirements

Category	Requirement
Performance	Fast load times, optimized assets
Accessibility	WCAG-friendly contrast and semantics
Responsiveness	Fully functional on mobile and desktop
Privacy	No storage of sensitive personal data in frontend
Security	Protect API keys via server-side routes

8. Technical Architecture

Frontend

- Next.js
- Tailwind CSS
- Framer Motion or GSAP for animation

Backend

- API routes to handle AI requests securely
- Resume and portfolio data stored as structured JSON or database

AI Layer

- LLM API integration
 - Context built from curated personal knowledge base
 - Prompt design to maintain tone and factual grounding
-

9. Content Requirements (From User)

User will provide: - Latest resume - Personal bio/details - Old portfolio content - List of key projects - Preferred tone/personality traits for AI

10. Risks & Mitigation

Risk	Mitigation
AI hallucinating	Strict prompt grounding + fallback responses

Risk	Mitigation
Outdated info	Easy content update pipeline
Overly long AI answers	Response length control

11. Future Enhancements

- Voice-enabled Sidekick
 - Recruiter mode (structured Q&A)
 - Analytics dashboard for visitor questions
 - Multi-language support
-

12. Definition of Done

The product is complete when: - All core sections are implemented - AI Sidekick answers accurately using provided data - Site is responsive and deployed - Projects and experience are fully populated - Contact flow works correctly
